BACKGROUND

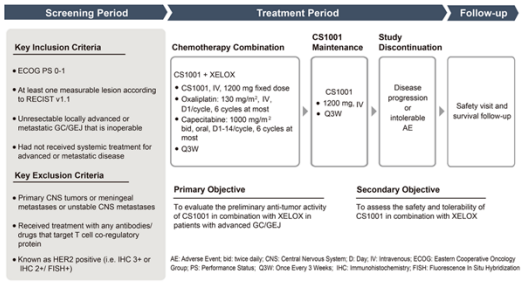
- Gastric cancer (GC) is the 2nd most common cancer in China that led to about 679,100 new cases and 498,000 deaths in 2015 [1]. Most GC patients (pts) are found to be at late stage when first diagnosed. The standard therapy for HER-2 negative advanced GC remains cytotoxic chemotherapy in the first-line setting and the median overall survival of such pts is only 10-11 months. Therefore, there is a great need for more effective treatments for advanced GC [2-6]
- CS1001 is a high-affinity, full-length, fully human anti-programmed death ligand-1 (PD-L1) immunoglobin G4 (IgG4, s228p) monoclonal antibody developed by OmniRat® transgenic platform which mirrors natural IgG4 human antibody and may potentially reduce the risk of immunogenicity and toxicity in pts
- In phase 1a of the first-in-human study (NCT03312842), CS1001 at 1200 mg fixed dose every 3 weeks (Q3W) was determined as the recommended phase 2 dose (RP2D) [6]
- Phase 1b is the dose-expansion part of the study to explore the efficacy and safety of CS1001 in multiple cohorts of selected tumor types [6]. Herein, we present the updated efficacy, biomarker, and safety data from the cohort of CS1001 in combination with chemotherapy as the first-line treatment in gastric or gastro-esophageal junction carcinoma (GC/GEJ)

METHODS

Key Eligibility:

- Eastern Cooperative Oncology Group (ECOG) performance status of 0-1
- Patients with histologically confirmed unresectable locally advanced or metastatic GC/GEJ adenocarcinoma
- Patients who had not received systemic treatment (HER2 inhibitors included) for advanced or metastatic disease

Figure 1 - Study Design and Objectives



AE: Adverse Event; bid: twice daily; CNS: Central Nervous System; D: Day; IV: Intravenous; ECOG: Eastern Cooperative Oncology Group; PS: Performance Status; Q3W: Once Every 3 Weeks; IHC: Immunohistochemistry; FISH: Fluorescence In Situ Hybridization

Assessments:

- Tumor assessments were conducted per RECIST v1.1 by investigators every 9 weeks (Q9W) in the first year, then every 12 weeks (Q12W)
- Exploratory efficacy analyses were performed in subgroups with different PD-L1 expression evaluated by immunohistochemistry (Ventana SP263 antibody) with combined positive score (CPS)
- Adverse events (AEs) were graded according to the National Cancer Institute Common Terminology Criteria for AE (NCI-CTCAE) v4.03

RESULTS

Patient Disposition, Demographics, and Baseline Characteristics (Safety Analysis Set):

- As of 19 Feb 2020, 29 pts were enrolled in GC/GEJ cohort; 7 pts remained on treatment and 22 discontinued
  - Reasons of CS1001 discontinuation included progressive disease (n = 13), adverse event (n = 4), patient's withdrawal (n = 3), death (n = 1), and treatment suspension > 6 weeks (n =1)

Table 1 - Demographics and Baseline Characteristics (Safety Analysis Set)

Characteristics		GC/GEJ
		N = 29
Age (years)	Median (range)	60 (40, 73)
Sex, n (%)	Male	23 (79.3)
	Female	6 (20.7)
ECOG PS, n (%)	0	12 (41.4)
	1	17 (58.6)
Initial diagnosis	n (%)	GC: 26 (89.7) GEJ: 3 (10.3)
Time since initial diagnosis (month)	Median (range)	0.9 (0.12, 79.2)
Prior anti-cancer therapy regimen	Median (range)	0 (0, 2)*
Current cancer stage, n (%)	Stage III	1 (3.4)
	Stage IV	28 (96.6)

ECOG – Eastern Cooperative Oncology Group; PS – Performance Status
* A total of 10 patients received neoadjuvant and/or adjuvant therapy, among which 1 patient received both neoadjuvant and adjuvant therapies around curative surgery

Efficacy:

- As of 19 Feb 2020, all 29 pts from GC/GEJ cohort were included in the efficacy analysis set
- Eighteen (62.1%) pts achieved partial response (PR), including 17 confirmed PRs and 1 unconfirmed PR; 6 (20.7%) pts had stable disease (SD); 3 (10.3%) pts experienced progressive disease (PD); 2 (6.9%) pts discontinued without having any post-baseline tumor assessment (i.e. NA)

Table 2 – Summary of Objective Response, PFS, OS (Efficacy Analysis Set)

	GC/GEJ (N = 29)
ORR, n (%)	18 (62.1)
Best overall response, n (%)	
PR	18 (62.1)
SD	6 (20.7)
PD	3 (10.3)
NA	2 (6.9)
DCR, n (%)	24 (82.8)
Median DoR (month, range)	11.3 (1.0+, 14.1+)
6-month DoR rate (%, 95% CI)	76.6 (48.8, 90.4)
Median PFS (month, range)	8.3 (1.4, 16.1+)
Median OS (month, range)	17.0 (1.4, 18.7+)

NA – Not Applicable; ORR – Objective Response Rate; DCR – Disease Control Rate; DoR – Duration of Response; PFS – Progression-Free Survival; OS – Overall Survival
"+" stands for the values of censored patients

Figure 2 – Representative CT Scan Images of a Responder

Male, 58 years old, stage IV gastric cancer with liver metastasis; has completed 20 cycles of CS1001 treatment and 6 cycles of XELOX; remained on treatment as of 19 Feb 2020

Figure 3 – Waterfall Plot of Maximum Target-Lesion Shrinkage by RECIST v1.1 (Efficacy Analysis Set)

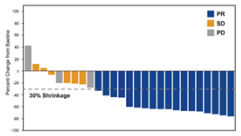

Figure 4 - Spider Plot of Percentage Change from Baseline in the Sum of Diameters (Efficacy Analysis Set)

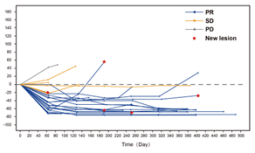
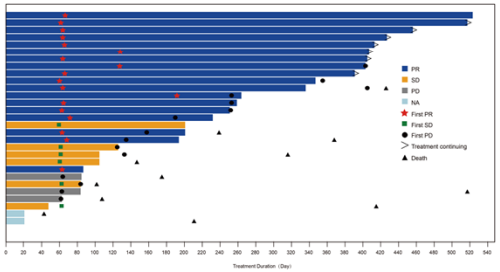


Note: 2 patients were not shown due to lack of post-baseline tumor assessment

Figure 5 – Swimmer Plot of Treatment Duration and Tumor Assessment by RECIST v1.1 (Efficacy Analysis Set)



Biomarker Subgroup Analysis – PD-L1 Expression:

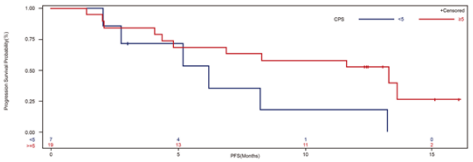
- As of 19 Feb 2020, 26 pts from efficacy analysis set were evaluable for PD-L1 expression
- ORRs were 58% and 71% in CPS ≥ 5 (n = 19) and CPS < 5 (n = 7), with median DoR being unreached and 5.0 months, respectively
- Median PFS was 13.3 months in CPS ≥ 5 (n = 19) and 6.2 months in CPS < 5 (n = 7)

Table 3 – Summary of ORR, DoR & PFS (CPS ≥ 5 vs CPS < 5)

	EAS (N = 29)	CPS ≥ 5 (n = 19)	CPS < 5 (n = 7)
ORR, n (%)	18 (62.1)	11 (57.9)	5 (71.4)
Best overall response, n (%)			
PR	18 (62.1)	11 (57.9)	5 (71.4)
SD	6 (20.7)	4 (21.1)	1 (14.3)
PD	3 (10.3)	2 (10.5)	1 (14.3)
NA	2 (6.9)	2 (10.5)	0
Median DoR (month)	11.3	NR	5.0
Median PFS (month)	8.3	13.3	6.2

EAS - Efficacy Analysis Set; NA – Not Applicable; NR – Not Reached; ORR – Objective Response Rate; DoR – Duration of Response; PFS – Progression-Free Survival; CPS – Combined Positive Score

Figure 6 – Kaplan-Meier Curve of PFS (CPS ≥ 5 vs CPS < 5)



Exposure and Safety (Safety Analysis Set):

- As of 19 Feb 2020, the median duration of CS1001 treatment was 232 (range: 21-523) days in GC/GEJ cohort
- All-grade and Grade ≥ 3 AEs related to CS1001 occurred in 28 (96.6%) pts and 14 (48.3%) pts, respectively
  - The most common (n ≥ 2) Grade ≥ 3 CS1001-related AEs included platelet count decreased (n = 6), white blood cell count decreased (n = 3), neutrophil count decreased (n = 3), anaemia (n = 3), and fatigue (n = 2)
  - Three pts each had one CS1001-related AE leading to CS1001 discontinuation: Grade 3 hypothyroidism, Grade 3 abnormal liver function, and Grade 2 pneumonia
- Immune-related AEs occurred in 21 (72.4%) pts
- No AEs leading to death or new safety signals were observed

Table 4 - Summary of Adverse Events (Safety Analysis Set)

	GC/GEJ (N = 29)
Number of patients with at least one below event	n (%)
TEAE	29 (100)
Grade 3/4 TEAE	20 (69.0)
TEAE related to CS1001	28 (96.6)
Grade 3/4 TEAE related CS1001	14 (48.3)
SAE	12 (41.4)
SAE related to CS1001	6 (20.7)
irAE	21 (72.4)
Grade 3/4 irAE	6 (20.7)
TEAE leading to CS1001 discontinuation	4 (13.8)
TEAE leading to discontinuation of CS1001 or chemotherapy	8 (27.6)
TEAE leading to CS1001 dose interruption	1 (3.4)
TEAE leading to treatment cycle delay	16 (55.2)
TEAE leading to death	0
Infusion-related reaction	2 (6.9)

TEAE – Treatment Emergent Adverse Event; SAE – Serious Adverse Event; irAE - Immune-related TEAE

CONCLUSIONS

- CS1001 in combination with XELOX demonstrated robust and durable anti-tumor activities with a tolerable safety profile in first-line treatment setting among patients with advanced GC/GEJ
  - ORR 62%, mDoR 11.3 months, mPFS 8.3 months, mOS 17.0 months
- Preliminary biomarker analyses suggested that tumor PD-L1 expression level may be associated with the treatment effect of CS1001 plus XELOX
- Current data support further development of CS1001 plus XELOX in advanced GC/GEJ. A double-blinded, randomized phase 3 study is ongoing in China
  - GEMSTONE-303 (CS1001-303, NCT03802591) investigating CS1001 in combination with XELOX in patients with advanced GC/GEJ

ACKNOWLEDGEMENT

We thank all the patients who participated in this study, their families, participating investigators and clinical sites. This study is sponsored by CStone Pharmaceuticals (Su Zhou) Co., Ltd. Medical writing assistance was provided by Qinzhou Qi from CStone Pharmaceuticals.
